APPENDIX I

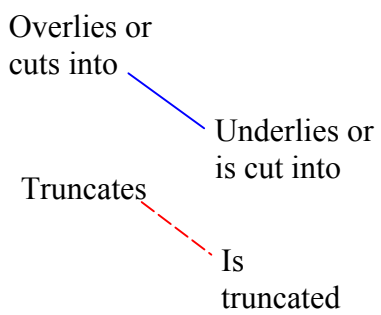
STRATIGRAPHICALLY RELATED BURIALS
(SERIES CHARTS)

Legend for diagrams:

Each box represents a burial. Within the box are listed the burial number, elevation (above sea level), and coffin shape if known. The coffin shape was noted only if considered potentially diagnostic of chronology.

Burial Number Elevation Coffin shape

The boxes are positioned on the diagrams so as to roughly represent their positions in the ground in cross-section. The lines indicating stratigraphic position (implying the sequence of interments) are to be read from top to bottom, so that a pair of burials linked by a line have the later burial at the top of the line and the earlier burial at the bottom of the line.



Coffin shape:

hex = "hexagonal" (shouldered)
hex** = child with hexagonal coffin
4-s = four-sided
rect. = rectangular
tapered = four-sided and tapered toward the foot, subadult
tapered* = four-sided and tapered toward the foot, adult
? = indeterminate shape
nc = no coffin

Shaded boxes indicate that the burials shown adjacent to each other were probably in a shared grave.
